

Color Management & Consultation Services

The publishing and printing workflow revolves around RGB and CMYK color spaces, yet there are as many RGB color spaces as there are monitors, and as many CMYK color spaces as there are printers.

The EvioTech color management service program covers every aspect of a professionally managed and controlled image workflow and production. It includes all necessary services and tasks, such as professional analysis, implementation, workflow, workshops and training.

The EvioTech color management service program is provided as an annual service contract and with service visits delivered according to either a monthly, bi monthly or quarterly schedule, depending on customer requirements and demands.

Printing Press

Measurement and creation of ICC printing press profiles as well as implementation in your color workflow.

Proofing

Measurement and implementation of ICC profiles on digital proofers and/or inkjet printers for different media types. Implementation of ICC soft proof profiles according to different media types.

Monitors

Measurement and calibration of monitors and implementation of created monitor profiles.

Scanners

Measurement and calibration of scanners and implementation of created scanner profiles in your color workflow.

Photo Quality

Continuous evaluation and consultation of digital photo quality during the whole production process, from source to final output in print.

Photo Retouching

Consultation and training in color retouching and correction of digital photos.
